PRESS RELEASE

One of the leading investment companies in the country, BCC Invest, launched the first Euro-denominated fund in Kazakhstan

The BCC Euro fund was registered in December last year. The fund is available to retail and corporate investors and will provide exposure to European fixed income instruments.

The fund is designed for a wide range of investors seeking exposure to the European capital market. The eurozone countries are among the leading developed economies of the world. European countries account for 20% of global GDP. Europe is a good and undervalued alternative to the turbulent American market.

According to the managers' plan, the fund's assets will be based on bonds with a high credit rating: sovereign issues and debt instruments of the continent's leading corporations. The fund will pursue an active management style.

The nominal value of the share will be one euro. The fund's target return is 2% per annum.

The fund is scheduled to list on the Kazakhstan Stock Exchange (KASE) in the second quarter of this year, after which shares will be available for purchase through any Kazakhstani broker with access to KASE.

"We are pleased to mark a new milestone in the development of our funds and launch the first European investment fund in Kazakhstan. This fund brings European markets even closer to our investors," notes **Ruslan Zerilov, Managing Director of BCC Invest.**
